

DOORS & DRAWERS INSTALLATION GUIDE

Follow these steps to properly position, secure, and adjust your Videl door and drawer assembly for a clean and professional fit.

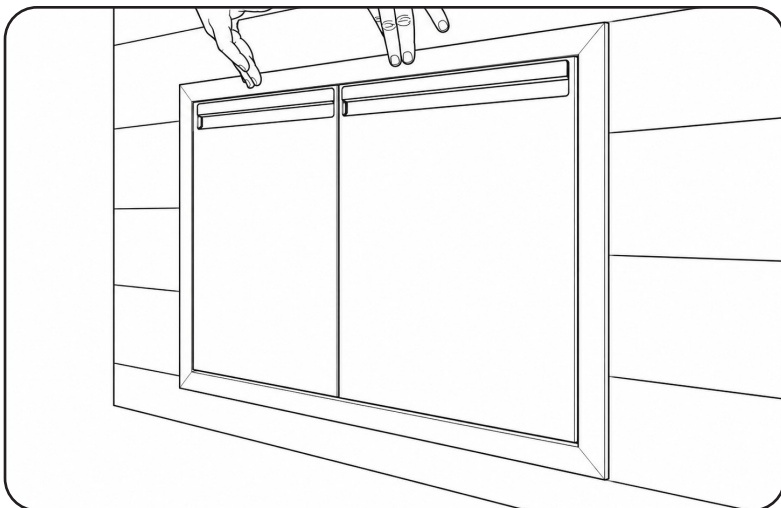

CHECK THE OPENING

Confirm the opening matches the required dimensions. Make sure it is clean, square, level, and free from any obstructions before beginning installation.

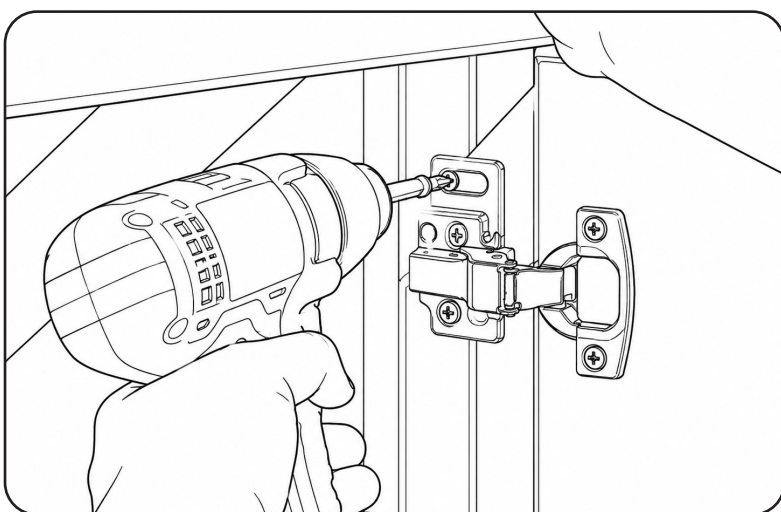

POSITION THE FRAME

Carefully place the assembly into the opening. Center the frame and confirm that all outside edges sit evenly and flush against the cabinet surface.

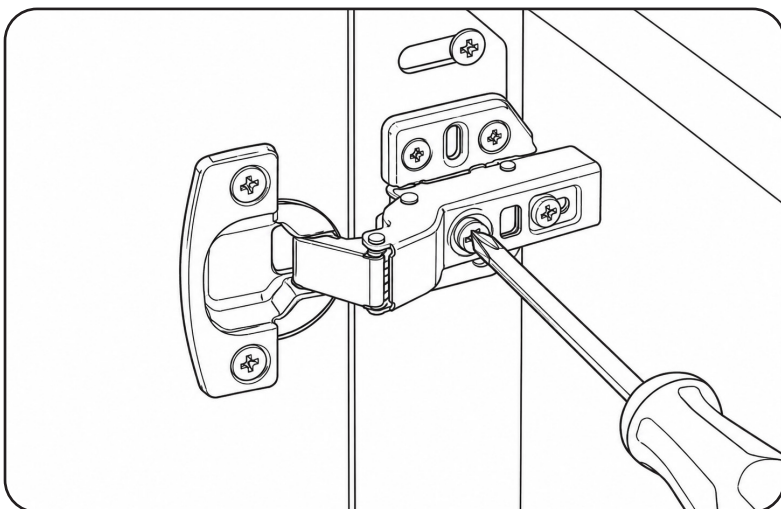

POSITION AND ALIGN THE FRAME

Carefully place the door assembly into the opening. Center the frame and confirm that all edges sit evenly and flush against the cabinet surface before securing it.

SECURE THE FRAME

Fasten the frame through the provided mounting holes using the appropriate screws. Tighten each screw gradually and evenly. Do not overtighten.

ADJUST THE DOOR TILT

Use the hinge adjustment screws to level each door and create even spacing around the frame. Make small adjustments, then open and close the doors to confirm they move smoothly and sit flush when closed. For drawer models, confirm that every drawer slides smoothly and remains properly aligned.

SOFT CLOSING DOORS AND DRAWERS

Your Videl doors and drawers feature soft closing hardware for smooth, quiet operation. Gently guide them toward the closed position and allow the mechanism to finish closing automatically. Do not force or slam them shut.
